themomentsandmemories.co.uk

A live crawl of the site, checked by rules, judged by Jev, scored by code and explained in plain language.

6	11	0
HTML pages analysed	actions found	critical or high

Partial audit: Jev judgments unavailable, so content quality was not assessed; PageSpeed Insights unavailable, so performance used crawl timings only. Scores are an internal rubric for prioritising work, not a prediction of rankings or traffic. Method, formulas and sources are in the appendix.

HOW THIS AUDIT WAS MADE

A source finds, code decides, Jev judges, Claude writes

Each stage does only what it is good at. Anything a count, a status code or a string match can decide is decided by code. Jev, TypeSafe's System One model, answers narrow typed questions about meaning, with probabilities. Nothing is invented to fill a gap: missing data is shown as missing.

1 Crawl
Live fetch from the homepage: robots.txt, sitemaps, internal links, JavaScript rendering when needed.
8
URLs · 35 requests

2 Rules
52 deterministic checks tied to Google Search Central and web standards.
11
rule findings

3 Jev judges
Typed Choice, Score and Noul questions, batched per page, with probabilities kept.
0
judgments · 0 requests · $0.0000

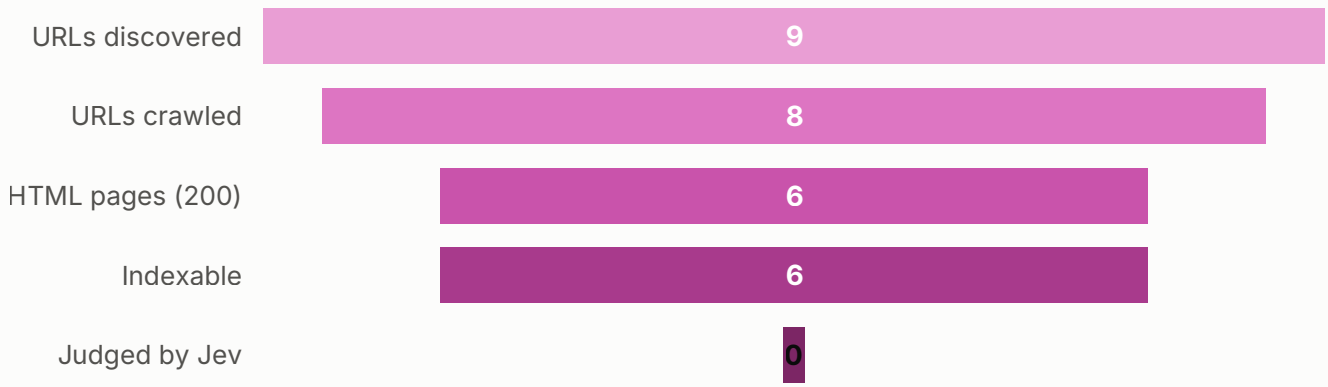

4 Measure
PageSpeed Insights: real-user Core Web Vitals and Lighthouse lab scores.
0
PageSpeed runs

5 Score and write
Code scores and ranks every action; the narrative is written from the evidence.
11
ranked actions

Who decides what

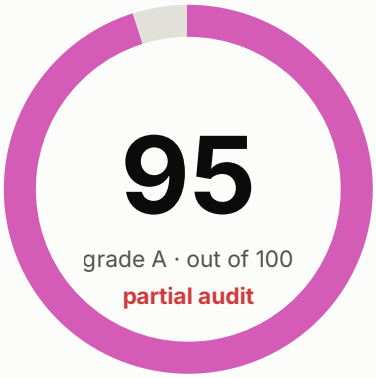

STAGE	OWNS	NEVER DOES
Code	Crawling, status codes, counts, duplicates, schema parsing, formulas, ranking	Guess at meaning
Jev	Page type, search intent, importance, helpfulness, specificity, trust, citability, title and meta fit, competing page pairs	Predict rankings or traffic, invent data, grant permission to act
PageSpeed	Chrome UX Report field data and Lighthouse lab scores	Stand in for every page or device
Claude	The summary and plan, citing action IDs	Add findings that the evidence does not show

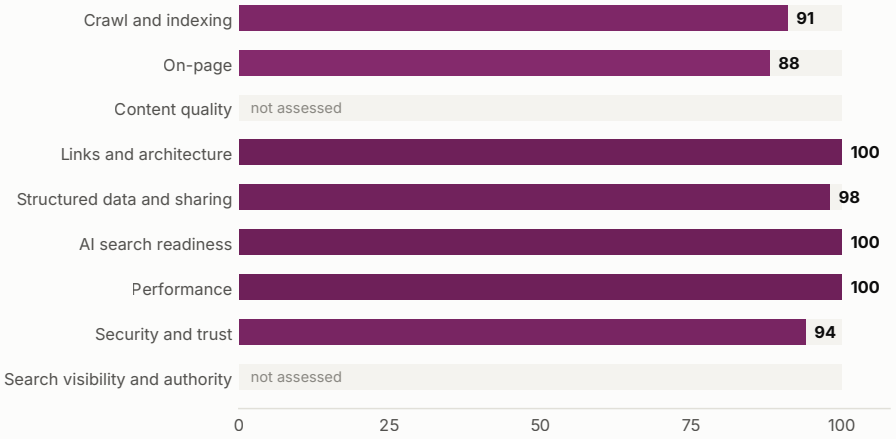

What went through each stage

SCORECARD

PRIORITIES

What to fix first

Impact combines severity, how many pages are affected and how important Jev judged those pages to be. Effort is a planning estimate, not a quote.

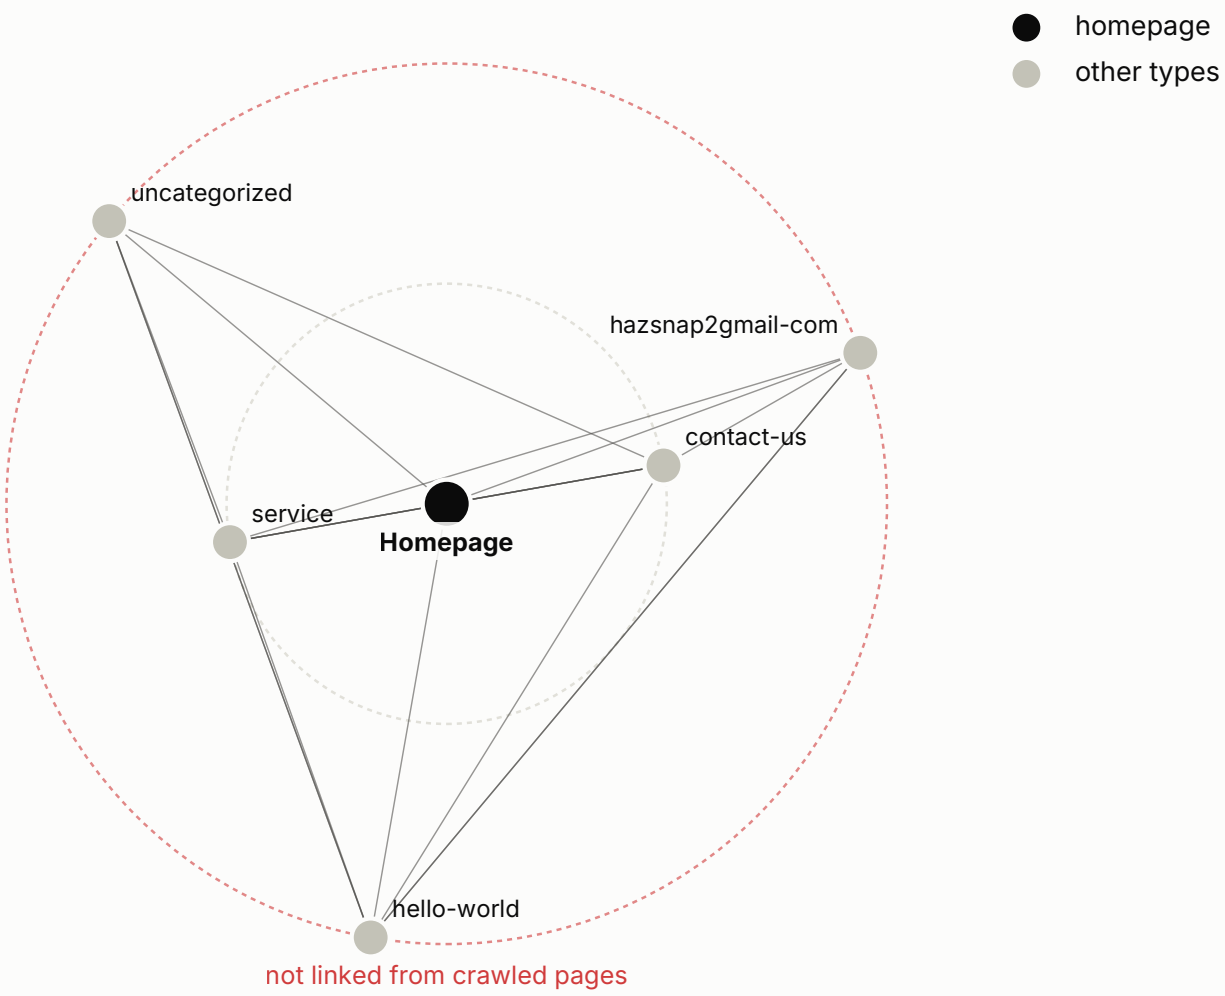

Each dot is one action; labelled dots are fix-first or high impact. Colour shows priority.

Click depth from the homepage

robots.txt	found · Googlebot allowed · Bingbot allowed
XML sitemap	8 URLs in 7 file(s)
HTTPS	yes · HTTP redirects to HTTPS: yes
Missing page status	404 correct

APPENDIX

Method, sources and limits

Formulas

Area score starts at 100 and subtracts, per finding, a severity amount (critical 25, high 12, medium 6, low 2, info 0) times (0.5 + 0.5 × share of pages affected). Site-wide findings count as full share. Content quality and AI search readiness blend 70% importance-weighted Jev judgments with 30% rules. Performance blends 50% Lighthouse mobile performance with 50% crawl observations.

Overall score is the weighted mean of scored areas (weights in the scorecard). Unscored areas are left out, never counted as zero. A blocked site is capped at 20; a site without reliable HTTPS at 60.

Impact = severity weight (critical 10, high 6, medium 3, low 1) × (0.6 + 0.4 × reach) × (0.6 + 0.8 × highest Jev importance among affected pages), scaled so the largest is 100. **Priority:** P1 for critical, or high with impact 40 or more; P2 for impact 30 or more or any high; P3 otherwise. **Quick win:** impact 35 or more with effort of hours.

Jev

Model requested n/a, returned n/a. 0 requests, 0 input tokens, 0 failed, 0 skipped by the budget cap. Cost $0.0000 at $0.042 per million input tokens (output is free). Page text sent to Jev is capped at 6,000 characters. Jev answers are model judgments, not measurements; decisive does not mean correct.

Limits

- The crawl covered 8 URLs. Orphan and depth findings only see links on crawled pages.
- No Search Console, analytics, backlink or keyword data was used (run with --full for DataForSEO). Nothing here measures rankings, traffic or revenue.
- PageSpeed lab scores vary between runs. Field data exists only for sites with enough Chrome traffic.
- Rules marked heuristic are editorial conventions, not search engine requirements.
